The automation revolution: humans at the helm

Technology is driving and enabling change on an unprecedented scale. Automation, AI, machine learning and deep learning are quickly becoming the new sinews of successful businesses. They have huge potential to enhance innovation and productivity as well as impact on the fundamentals of business – structures, service delivery, competitive advantage and workforce engagement.

Many are lamenting the rise of the robots and the weakening power of humanity. The undeniable truth is that this change is already happening and providing new opportunities that businesses must embrace and adapt to.

In this session, Benedict Dellot, Associate Director of Economics, Enterprise and Manufacturing at the RSA will draw on findings from his 'Age of Automation' report. He'll explore how we can embrace and influence this technology-enabled shift to maximise the positive economic and employment effects of inclusive automation, on our own terms.

WHEN: Thursday 8 February 2018 from 3.30pm to 6pm, followed by drinks and networking

WHERE: Taylor Vinters, Tower 42, 25 Old Broad Street, London, EC2N 1HQ

RSVP: paris.tague@taylorvinters.com

Future events

The project will continue to evolve over 2018 and planned events include:

- A new era of ethical governance
- AI: How are established organisations deploying it; who is making the decisions; what are the inhibitors; where is the opportunity?
- 21st century workplace - the people challenge
- The human cloud - virtual working and futureproofing organisational strategy
- When does customer customisation become corporate big brother?
- Building Anti-Fragility into Cyber Strategy
- The transforming global political landscape – what's the strategic impact?
